Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-17, drawn to a method for identifying one or more low abundance sequences, classified in class 435, subclass 6.
 - II. Claims 18-22, drawn to a kit for identifying one or more low abundance sequences, classified in class 422, subclass 61.

2. The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process of using a product and product. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the product as claimed can be used in a materially different process of using that product i.e. kit of Invention II can be used to synthesize hybridization probes.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

A telephone call was made to Edwin Merkel on 18 January, 2001 to request an oral election to the above restriction requirement, but did not result in an election being made. Mr. Merkel requested a written Restriction be mailed.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
